---

## Latest release information

You can find the version number currently installed by following the steps shown below.

1. In the program's main interface, select ' Help' followed by ' About' and a window will display the version number of the product you have installed.
2. Take note of the version number shown and check it against the list below.
3. If your installed version is older (i.e. lower version number than the "Current Version" number shown below ) you should consider updating to the latest version.
4. Uninstall the current version of the software and restart the computer.
5. Download the latest install files via the individual link on each product below.
6. Install the new version that you downloaded in step 5.
